**\*iCopyright\*.com Signs Up Top Web Publishers**

(Copyright.com is testing meter that automatically licenses reprints, in format desired by user, of online text, expects to have in operation by end of 1999)

Newsbytes News Network, p N/A

October 11, 1999

DOCUMENT TYPE: Journal (United States)

LANGUAGE: English RECORD TYPE: Fulltext

WORD COUNT: 695

**ABSTRACT:**

Copyright.com wants to simplify the process of attaining reprints of online articles by pre-obtaining authorization and pricing of the texts. The company's meter will record usage and alert the permissions clearinghouse to distribute the content in the format requested by the consumer. The product also tags the material by assigning an identification number in the consumer's file. The automatically licensed article can then be reused by millions of people. The company is currently testing the product, together with Washingtonpost.Newsweek Interactive, Dow Jones & Company, Ziff-Davis, IDG, and CMP, and expects it to be in operation by the end of 1999.

**TEXT:**

RENTON, WASHINGTON, U.S.A., 1999 OCT 11 (NB) -- By Sherman Fridman, Newsbytes. Publishers and content providers want to make money publishing their material online. Hardly a shocking pronouncement; however, most publishers and providers are not geared to handle the fulfilment process, whether it be providing the copies or authorizing the use of reprints and collecting a fee in return.

Privately held \*iCopyright\*.com has set its sights on making the entire process easier, and top tech publishers such as IDG and CMP have joined such media heavyweights as Ziff-Davis, Dow Jones & Company, and Washingtonpost.Newsweek Interactive in a pilot project to see if they're right.

In an interview with Newsbytes, Michael Croan, spokesperson for \*iCopyright\*, Inc., explained that while there is a great demand for reprints of articles that have been published online - either for public relations, personal ego gratification, or other business reasons - the means of obtaining these reprints has been inefficient and timely.

The existing procedure for getting reprints from publishers and content providers, according to Croan, is for a request to be made to the publisher who must then respond back with permission and a price breakdown. If accepted, the publisher must then actually deliver the reprints.

Because this is an inefficient process that can take up to several weeks, a lot of people will just as soon make a copy of the material off the Internet and proceed to the office copier or neighborhood copy shop for 'reprints.' Of course, as Croan said, "That's not legal."

Croan explained that \*iCopyright\*.com, at <http://www.icopyright.com>, expects to facilitate the process as part of a win-win solution to the archaic methods being employed at present. The buyer will benefit because reprint authorization and pricing have been pre-obtained by \*iCopyright\* who will also be in a position to give the buyer the reprints in any form he desires.

Publishers will benefit because \*iCopyright\* will assume this formerly labor-intensive chore of licensing the re-use of material; however, publishers and content providers will still receive the increases in their income stream that the sale of reprints represents. Often, as \*iCopyright\* says, this income is crucial since revenues from advertising and subscriptions are frequently insufficient to cover expenses.

Here's how the system works. A Web user clicks on the \*iCopyright\* symbol located at the bottom of a Web page. A meter then pops up and displays the information needed to properly license the content. Among other things, the meter displays who owns the material and who publishes the material. It also displays the "permissions," i.e., how the content may be used and what it will cost. In addition, terms of use are also displayed.

If the Web user accepts the terms under which the content may be licensed for reuse, the meter would then record usage and notifies the rights and permissions clearinghouse to deliver the content in the form needed by the user.

However, the \*iCopyright\* meter also performs another profitable function: it 'tags' the content that has been properly licensed to the user with a unique identification number embedded in the file that is delivered to the user. This tag can track all derivative uses of the original content and allows everyone who receives the licensee's derivative use to quickly locate the original material. In this sense, the meter attaches itself to the licensed content and, according to \*iCopyright\*, encourages users to buy their own license to reuse the material.

With this feature, an article can be published once, but automatically licensed by millions of different people for their own reuse. Every derivative use becomes a vehicle to sell even more derivative uses.

Of course, the meter feature works best online. But \*iCopyright\* feels that the meter can work for content published off-line as well. There is a serial number in the form of a URL on the bottom of a page that was published offline. To instantly license this content for reprint or reuse, the user enters the URL into any Web browser or calls the telephone number provided.

Although currently in pilot-program form, \*iCopyright\* expects the system to be fully operationable before the end of the year.

**\*iCopyright\*.com to Automate Copyright Permissions and Reprints**  
(Dow Jones & Co, Newsweek Interactive, and other business publications join  
**\*iCopyright\*.com's beta test of automated copyright clearinghouse)**

EContent, v 22, n 4, p 11

August 1999

TEXT:

Several premier business publications have signed on to participate in beta testing of \*iCopyright\*.com's automated copyright permissions and reprint clearinghouse. Recently-added participants include Dow Jones & Company, Washingtonpost.com, Newsweek Interactive, Pricewaterhouse Coopers, the Software & Information Industry Association, and COMTEX.

For the test, publishers provide copyrighted content to clear for immediate reuse or for producing professional reprints. They assign business rules to their content specifying Web, email, or print reuse availability, plus prices for reuse and terms of use. Content is delivered in customer-specified format such as HTML, PDF, or professional hardcopy reprints. A closed group of corporate users is beta-testing the service, getting permissions for reuse or reprints in minutes instead of the customary days or weeks.

The service intends to eliminate the lengthy process required for legal compliance for use of copyright content published on the Web or in print. There is no charge to register content or for users to establish an \*iCopyright\*.com account to clear content. The Web service will be launched later this year and will allow instant reuse or reprint of content from any registered publisher.
